Education

- 2013–2018 **Ph.D., Biochemistry and Molecular Biophysics,
California Institute of Technology**
Defense Date: 18 September, 2018
Degree Awarded: 31 October, 2018
- 2009–2013 **B.A., *cum laude*, Biology
Cornell University**

Appointments

- 11/2019 – **Computational Biologist II, eGenesis**
One of two founding members of the computational biology unit.
Introduced ATAC-seq, scRNA-seq and scATAC-seq to eGenesis.
I collaborated on the development of kidney dissociation protocols and used these protocols to create an atlas of the pig kidney cortex using scRNA-seq.
I used the above methods to generate a compendium of promoters that stably express genes ubiquitously or with high tissue-specificity at desired levels with low burstiness. *Patent pending.*
- 7/2020 – **Visiting Scholar, Laboratory of Ilya Ruvinsky,
Northwestern University**
I collaborate with the Ruvinsky lab on RNA-seq analysis of *C. elegans* biology.
- 01/2019–11/2019 **Postdoctoral Associate, Laboratory of Eric J. Alm,
Massachusetts Institute of Technology**
I developed methods for barcodeless, highly multiplexed RNA-seq of multiple bacterial species using a single library preparation protocol.
My main project centered around recreating the vaginal microbiome *in vitro* and dissecting the causal interactions between microbial species using a mixture of computational and experimental methods. I hoped to apply the algorithms I developed at Caltech (see below) to develop active learning models that combined iterative experimental minibatches with continuous computational analysis.
I terminated my postdoctoral research prematurely due to a major personal loss, unrelated to my work at MIT.
- 11/2018–01/2019 **Postdoctoral Fellow, Labs of Paul W. Sternberg and Matt Thomson,
California Institute of Technology**
I used this period immediately following my defense to finish projects with my Ph.D. advisor, Paul Sternberg, and a member of my committee, Matt Thomson, before moving on to my postdoctoral position at MIT in January, 2019. I developed active learning algorithms for analysis of CRISPR screens in mammalian cells, using transcriptomes as phenotypes.
